DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-18, drawn to a conjugate.

Group II, claim(s) 19-20, drawn to a method of making the conjugate.

Group III, claim(s) 21, drawn to a pharmaceutical composition.

Group IV, claim(s) 22, drawn to a method of treatment.

The inventions listed as groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the conjugate of group I lacks novelty (i.e., it is anticipated by prior art reference)- see, e.g., J. Clin. Invest., vol. 96, pp-1815-1822, 1995. Thus, the special technical feature which links the claims does not provide a contribution over the prior art (with respect to groups II-IV) so unity of invention is lacking.

Upon election of an invention from groups I-IV above, applicant must further elect a patentably distinct sequence of the conjugate. **This is not an election of species.**

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds

Art Unit: 1654

and are unrelated to one another. Polypeptide sequences are also structurally distinct compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide and polypeptide sequence are presumed to represent an independent and distinct invention, subject to restriction requirement pursuant to 35 UCS 121 and 37 CFR 1.141.

Should applicant traverse on the ground that the sequences are not patentably distinct, applicant should submit or identify such evidence now of record showing the sequences to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the prior invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy Teller whose telephone number is 571-272-0971. The examiner can normally be reached on Monday-Friday from 5:30 am to 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell, can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
